Results-oriented software engineering professional with 5 years of experience in field. Well-versed in promoting object-oriented approaches to real-time software development. Analytical and detail-oriented.

Work History

2017-02 - Current

Software Developer

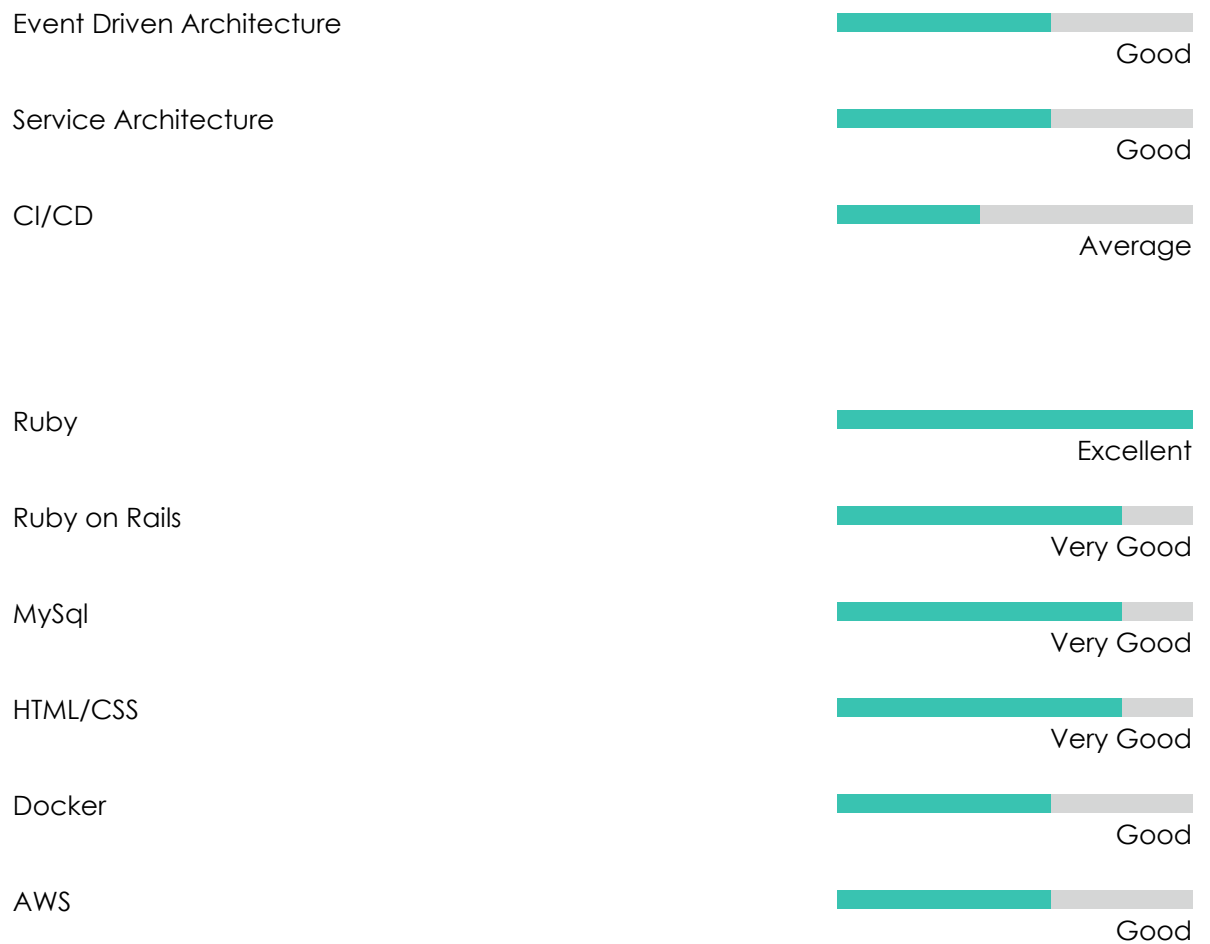

Profitero

- Designed and developed microservice solution to automate search of list of technologies used on 3rd party sites, such as: js scripts that collect information about device, known security technologies that site uses.
This allowed engineers to greatly simplify data collection
- Designed and developed service that allowed to emulate internal development environment and provided access to it through UI. This solution helped to train new employees faster
- Moved logging and monitoring services to Datadog. This allowed to detect and react to problems much earlier
- Bypassed number of sophisticated anti-bot protections on many sites (Amazon, Peapod, Kroger, Walmart, Tesco etc.), which made it faster and easier for company to get important data
- Revised, modularized and updated old code bases to modern development standards, reducing operating costs and improving functionality.
- Developed training program for new employees. Mentored engineers and passed on knowledge of internal system

Skills
